PROFESSIONAL SUMMARY

Motivated Computer Science graduate specializing in Python, Full-Stack Web Development and AWS Cloud Practitioner. Proven ability to write clean code, develop web applications, and deploy functional predictive models. Strong problem-solver dedicated to securing a **Software Development Engineer** position.

EDUCATION

S.V.K.P Jr College, Penugonda, West Godavari — **June 2020 – May 2022**
Intermediate in Computer Science & Engineering (Vocational); **CGPA: 9.37**

Swarnandhra College of Engineering and Technology, Narsapur, West Godavari — **Sep 2022 – Apr 2026**
B.Tech in Computer Science & Engineering - Data Science; **CGPA: 8.45**

SKILLS

Programming Languages: Python
Databases: MySQL & MongoDB
Core CS: DSA & OOP
Web Development: HTML, CSS, FastAPI, Flask and Django
Machine Learning: TensorFlow,RAG & Prompt Engineering
AWS: EC2, Lambda, ELB, IAM, S3 & ECR
Tools & Version Control: Linux, Docker, Git & GitHub

INTERNSHIP

Python Full Stack Development Internship - Datavalley India Pvt. Ltd — **Dec 2025 – Apr 2026**

- Gained practical experience in full-stack web development by building responsive user interfaces with HTML and CSS, and setting up reliable data storage using Python and MySQL.
- Built backend integrations using Flask and Django to connect front-end components with databases, applying these skills to develop my final year academic project.

PROJECTS

Deep Learning Based Monkeypox Detection & Outbreak Prediction: Github

- Built a web platform to classify Monkeypox skin lesions and predict outbreak risks, delivering fast, AI-driven results using Flask and ONNX models.
- Containerized the application using Docker and deployed the scalable architecture onto AWS EC2 instances managed by Load Balancer.

Serverless Image Labeling Pipeline (AWS Lambda, S3, Rekognition): Github

- Built an automated image-labeling system that detects objects in uploaded images and draws precise bounding boxes using Python (Pillow) and AWS Rekognition.
- Engineered a real-time, serverless workflow using S3-triggered AWS Lambda functions, ensuring secure operations via IAM policies.

Two-Phase Transfer Learning for Rice Leaf Disease Detection: Github

- Developed a lightweight computer vision model to accurately classify rice leaf diseases using MobileNetV3Large and a two-phase fine-tuning strategy.
- Trained the model via a GPU-accelerated TensorFlow pipeline, achieving ~86% accuracy with strong precision and recall metrics.

CERTIFICATIONS

- **AWS** Cloud Practitioner (CLF-C02) – **AWS** | Link
- **GitHub** Foundations (GH-900) – **Microsoft** | Link
- **MongoDB** Associate Developer Python (C100DEV) – **MongoDB University** | Link
- **Python** Full Stack Development Internship – **Datavalley India Pvt. Ltd** | Link
