PROFESSIONAL SUMMARY

Motivated Computer Science graduate specializing in Python, Full-Stack Web Development, and AWS Cloud Infrastructure. Proven ability to develop web applications and deploy scalable machine learning applications. Strong problem-solver dedicated to building efficient, cloud-native solutions.

EDUCATION

S.V.K.P Jr College, Penugonda, West Godavari **June 2020 – May 2022**
Intermediate in Computer Science & Engineering (Vocational); **CGPA: 9.37**

Swarnandhra College of Engineering and Technology, Narsapur, West Godavari **Sep 2022 – Apr 2026**
B.Tech in Computer Science & Engineering - Data Science; **CGPA: 8.45**

SKILLS

Programming Languages: Python
Web Development: HTML, CSS, Flask and Django
Databases: MySQL & MongoDB
Machine Learning: TensorFlow & Prompt Engineering
AWS: EC2, Lambda, ELB, IAM, S3 & ECR
DevOps: Linux, Docker, Jenkins, Git & GitHub

INTERNSHIP

Python Full Stack Development Internship - Datavalley India Pvt. Ltd **Dec 2025 – Apr 2026**

- Developed and integrated dynamic full-stack web applications by connecting front-end technologies (HTML, CSS, and JavaScript) with Python-based back-end frameworks like Django and Flask.
- Designed secure RESTful APIs for seamless client-server communication and utilized ORM techniques to manage data across MySQL and MongoDB, while leveraging Git for version control and AWS for deployment.

PROJECTS

Deep Learning Based Monkeypox Detection & Outbreak Prediction: Github

- Built a web platform to classify Monkeypox skin lesions and predict outbreak risks, delivering fast, AI-driven results using Flask and ONNX models.
- Automated the application's deployment by building a CI/CD pipeline with Jenkins and Docker, hosting the scalable containerized architecture on AWS EC2 and Load Balancers.

Serverless Image Labeling Pipeline (AWS Lambda, S3, Rekognition): Github

- Built an automated image-labeling system that detects objects in uploaded images and draws precise bounding boxes using Python (Pillow) and AWS Rekognition.
- Engineered a real-time, serverless workflow using S3-triggered AWS Lambda functions, ensuring secure operations via IAM policies.

Two-Phase Transfer Learning for Rice Leaf Disease Detection: Github

- Developed a lightweight computer vision model to accurately classify rice leaf diseases using MobileNetV3Large and a two-phase fine-tuning strategy.
- Trained the model via a GPU-accelerated TensorFlow pipeline, achieving ~86% accuracy with strong precision and recall metrics across all classes.

CERTIFICATIONS

- **AWS** Cloud Practitioner (CLF-C02) – **AWS** | Link
- **GitHub** Foundations (GH-900) – **GitHub** | Link
- **Python** Full Stack Development Internship – **Datavalley India Pvt. Ltd** | Link
