

PROFESSIONAL SUMMARY

Seeking a Software Engineer opportunity with an esteemed organization where I can utilize my technical skills and continuously enhance my learning in dynamic development environments. Passionate about building efficient and scalable software solutions with a strong foundation in programming, problem-solving, and modern technologies. Capable of adapting quickly to new tools, collaborating within teams, and growing as a technology-driven professional.

EDUCATION

S.V.K.P Jr College, Penugonda, West Godavari 2020 – 2022
Intermediate in Computer Science & Engineering (Vocational); **GPA: 9.37**

Swarnandhra College of Engineering and Technology, Narsapur, West Godavari 2022 – 2026
B.Tech in Computer Science & Engineering - Data Science; **GPA: 8.45**

SKILLS

Programming Languages: Python	Databases: MySQL & MongoDB
DevOps & CI/CD: Docker, Jenkins, Git & GitHub	AI/ML: Model Training & Prompt Engineering
AWS: EC2, Lambda, Elastic Load Balancer, IAM, S3, EBS & ECR	Web Development: HTML, CSS, Flask and Django

PROJECTS

Deep Learning Based Monkeypox Detection & Outbreak Prediction:

[Github](#)

- Designed and deployed a scalable AI-powered web platform for Monkeypox skin lesion classification and outbreak risk prediction using Flask, ONNX models, and asynchronous task processing.
- Implemented a production-style **CI/CD** pipeline using **GitHub Webhooks, Jenkins, Docker, and AWS ECR** with automated rolling deployments through **EC2 Auto Scaling Groups** and **Application Load Balancer** integration.
- Engineered a cloud-native deployment architecture using Flask + Celery containers, **AWS ElastiCache Redis**, Parameter Store secret injection, and immutable infrastructure provisioning via Launch Templates and User Data automation.

Serverless Image Labeling Pipeline (AWS Lambda, S3, Rekognition):

[Github](#)

- Built a serverless image-labeling pipeline using **AWS Rekognition** with S3-triggered Lambda for automated object detection.
- Processed images end-to-end by drawing bounding boxes with Pillow and storing annotated outputs in S3.
- Configured secure IAM-based cross-service execution, delivering a scalable real-time image analysis workflow.

Two-Phase Transfer Learning for Rice Leaf Disease Detection:

[Github](#)

- Built a lightweight disease classifier using **MobileNetV3Large** with a two-phase fine-tuning strategy to improve feature extraction.
 - Achieved **~86% accuracy** using a **GPU-accelerated TensorFlow training** pipeline with strong precision and recall across classes.
-

CERTIFICATIONS

- AWS Cloud Practitioner (CLF-C02)** – AWS | [Link](#)
 - GitHub Foundations (GH-900)** – GitHub | [Link](#)
 - Google AI/ML Virtual Internship** – EduSkills | [Link](#)
-

ACHIEVEMENTS

- Solved 40+ algorithmic problems on LeetCode, strengthening problem-solving and DSA fundamentals.
