PROFESSIONAL SUMMARY

Motivated Computer Science graduate specializing in Python, Backend Development and AWS Cloud Services. Proven ability to write clean code, develop web applications and build robust RESTful APIs. Strong problem solver dedicated to securing a **Software Engineer (SWE)** position.

EDUCATION

S.V.K.P Jr College, Penugonda, West Godavari **June 2020 – May 2022**

Intermediate in Computer Science & Engineering (Vocational); **CGPA: 9.37 / 10**

Swarnandhra College of Engineering and Technology, Narsapur, West Godavari **Sep 2022 – Apr 2026**

B.Tech in Computer Science & Engineering - Data Science; **CGPA: 8.45 / 10**

SKILLS

Programming Languages: Python

Databases: MySQL, MongoDB & PostgreSQL

Core CS: DSA & OOP

Web Development: HTML, CSS, FastAPI and Django

Machine Learning: RAG & Prompt Engineering

AWS: EC2, Lambda, ELB, IAM, S3 & ECR

Tools & Version Control: Linux, Docker, Git & GitHub

INTERNSHIP

Python Full Stack Development Internship - Datavalley India Pvt. Ltd **Dec 2025 – Apr 2026**

- Gained practical experience in full-stack web development by building responsive user interfaces with HTML and CSS, and setting up reliable data storage using Python and MySQL.
- Built backend integrations using Flask and Django to connect front-end components with databases, applying these skills to develop my final year academic project.

PROJECTS

Deep Learning Based Monkeypox Detection & Outbreak Prediction: GitHub

- Built a web platform to classify Monkeypox skin lesions and predict outbreak risks, delivering fast, AI-driven results using Flask and ONNX models.
- Containerized the application using Docker and deployed the scalable architecture onto AWS EC2 instances managed by Load Balancer.

Role-Based Photo Sharing Platform: GitHub

- Engineered a multi-role RESTful photo platform using FastAPI and SQLModel (PostgreSQL), implementing stateless OAuth2/JWT authentication, bcrypt PIN authorization, and role-based access control (RBAC) for Admin and Team workflows.
- Optimized backend performance and DB queries by resolving N+1 query bottlenecks via batch joins, configuring PostgreSQL connection pooling and offloading high-resolution media downloads directly to AWS S3 via SigV4 presigned URLs.

Serverless Image Labeling Pipeline (AWS Lambda, S3, Rekognition): GitHub

- Built an automated image-labeling system that detects objects in uploaded images and draws precise bounding boxes using Python (Pillow) and AWS Rekognition.
- Engineered a real-time, serverless workflow using S3-triggered AWS Lambda functions, ensuring secure operations via IAM policies.

CERTIFICATIONS

- **AWS** Cloud Practitioner (CLF-C02) – **AWS** | Link
- **GitHub** Foundations (GH-900) – **Microsoft** | Link
- **MongoDB** Associate Developer Python (C100DEV) – **MongoDB University** | Link
- **Python** Full Stack Development Internship – **Datavalley India Pvt. Ltd** | Link
